Dictionary of Acronyms and Technical Abbreviations - Jakob Vlietstra 2012-12-06

My first encounter with acronyms took place when I was ten years old and growing up in an occupied COWltry during the Second World War. My father proudly announced one day that, despite the ban imposed by the occupying

administration, he had managed to get a radio installed and could receive the BBC. (All acronyms used in this introduction are listed in this dictionary.) To me the meaning of "BBC" was that we would receive different information about the war than we got from the usual censored broadcasts. There was, of course, the well-known acronym associated with the NT, but at that time I did not realize that it meant more than the postal service, in those years a deteriorated service. Gradually the daily use of acronyms grew. Most of the newly acquired three-and four-letter abbreviations referred to organizations, such as the broadcasting corporations in The Netherlands and Belgium, and references to countries such as the USA, USSR, and UK. When attending high school (the HBS) after the war, my knowledge of acronyms grew slowly. Even during the ten years I spent in the Dutch Merchant Marine (the GHV), the number of acronyms was limited to advanced equipment that eventually became known as RADAR, LORAN, and DECCA.

COVID-19: EveryWoman's Feminist Response and Recovery Plan - Sylvia Estrada Claudio 2021-01-20

EveryWoman, a coalition of women's organizations and formations (currently numbering 11), combined with individual women affiliates and backed up by a Facebook Page (with more than 100,000 followers), was formally organized in August, 2017, for the purpose of defending democracy and upholding women's rights and dignity at a time when these are under severe attack not only in the Philippines but globally. We had come together, cutting across diverse socioeconomic, ethnic, professional, ideological, and generational backgrounds, to propel organized pushback against the further erosion of civic (also civil) space and of the status and rights that Filipino women have fought hard to attain and have won over the years. As such, our actions in the past years have tended towards the loud and dramatic - in the streets, in public fora, in stinging public statements, often joining our voice with those of our allied Hubs in Tindig Pilipinas. A book had no space in our crowded blueprint for 2020. But then the COVID-19 pandemic happened. As with everyone else, EveryWoman's world was turned upside down. Needing to get back our bearings - personally, organizationally, politically - we started discussions to try to understand the situation better, including the nature of this global health crisis, how it was affecting different aspects of our national life, how it was especially reshaping women's lives on the ground, how government was responding (or not), the role of the private sector and other institutions, the plight of ordinary citizens. We probed our own areas of work and engagement. We invited friends and colleagues where we needed help. We saw it to

be our responsibility to continue to surface and strengthen women's perspectives and agency in these difficult and extraordinary times. And, thus, this book was born, emerging from every woman talking to each other and claiming our space to speak up and be heard, intent to make a difference - especially since we saw no women at the frontlines of the national task force set up by the President to respond to the crisis.

Advances in technology are making the business and manufacturing environment increasingly complex. Standards can help us cope with this complexity. Given the strategic importance of computers in the economies of the industrial world, it is fitting that one of the most significant commercial stories of our time is the standardization of computer communications. Quite frankly, when we joined with other computer users to launch this effort we didn't predict its scope and we should have done. public visibility. In retrospect, I guess The computer assisted technologies looming on the horizon offer some of the greatest functional and productivity tools available to improve business operations. However, the absence of a standardized electronic link permeating most business organizations poses a severe impediment to the efficient deployment of this technology. The feasibility of using computer controlled devices to design, test, and manufacture products - as part of a massive network - is well within our technological grasp. However, unless the world agrees upon a global set of standards that will make multi-vendor computer systems interoperable, successful implementation of these technologies becomes less and less attractive.
