Virtual Clinical Excursions 2. 0 to Accompany Fundamental Concepts and Skills for Nursing - Susan C. de Wit 2004-10

This groundbreaking workbook/CD-ROM package brings learning to life in a "virtual" hospital setting. Each lesson has a textbook reading assignment with corresponding CD-ROM and workbook activities. The workbook acts as a map, guiding students through the CD-ROM as they care for patients in the virtual hospital, and helping them make connections between what they experience through the CD-ROM and what they've learned in their textbook. Each virtual hospital visit allows the student to access realistic information essential to patient care. The result is a true-to-life, hands-on

learning experience. The learning environment: Offers multiple information sources that can be examined and evaluated to understand how and why care is implemented. Has meaningful real-world problems that place the student in nursing scenarios where they can set priorities for care, collect data, analyze and interpret data, and reach conclusions about complex problems. The workbook includes lessons that complement the content in the textbook and guide the student through the multi-floor virtual hospital. The multi-floor virtual hospital includes a Surgery Department, Intensive Care Unit, and Medical-Surgical/Telemetry Floor. Content is included on patient care, patient records, case conference, and clinical review to engage the user in the subject matter and allow for further exploration. The CD-ROM offers users the opportunity to visit each patient and access realistic information essential for patient care, including charts, medication administration records, electronic patient records, video streaming of dialogue with nurses, and other related patient materials. A clock icon appears under each lesson, estimating how much time it will take to complete. A linkage icon alerts the user whenever they are about to begin an exercise that connects with previous lessons. TOC/Index matches chapters from the textbook with patients and lessons in the workbook.

Each section balances need-to-know narrative with step-by-step skills, and every chapter includes a detailed case study with a concept map to help you apply knowledge and use clinical judgement in clinical situations involving nursing skills. Over 250 step-by-step nursing skills with over 900 photos and illustrations. Language and concepts reflect those used on the NCLEX. Concept-based approach to skills education pairs well with the Giddens framework. Accuracy, Client-Centered Care, Infection Control, Safety, Communication, Evaluation, and Health Maintenance are reinforced throughout as Critical Concepts to skills performance. Case studies with concept maps depict patients with problems that might be experienced in the clinical setting and are followed by a series of critical thinking questions with every chapter. Application of the QSEN competencies: A question that challenges you to apply a QSEN competency is provided within the critical thinking questions of each case study. Lessons from the Evidence boxes highlight and summarize current research that can contribute to evidence-based clinical practice; Lessons from the Courtroom boxes summarize actual court cases related to the skills in the chapter in order to help you understand legal implications; and Lessons from Experience boxes use a storytelling format to share the experiences of more experienced nurses with students. Application of the nursing process: Nursing diagnoses that include specific examples of client outcomes and nursing interventions are presented within each section of the chapters. Uses an easy-to-understand, conversational writing style. Organized to present fundamental skills first, then intermediate acute care skills, and finally advanced skills often performed in critical care. Critical concepts align with the quality and safety framework of the QSEN competencies. Emphasis on safety and client centered care.
