Vice Patrol - Anna Lvovsky 2021-05-24

In the mid-twentieth century, gay life flourished in American cities even as the state repression of queer communities reached its peak. Liquor

investigators infiltrated and shut down gay-friendly bars. Plainclothes decoys enticed men in parks and clubs. Vice officers surveilled public bathrooms through peepholes and two-way mirrors. In *Vice Patrol*, Anna Lvovsky chronicles this painful story, tracing the tactics used to criminalize, profile, and suppress gay life from the 1930s through the 1960s, and the surprising controversies those tactics often inspired in court. Lvovsky shows that the vice squads' campaigns stood at the center of live debates about not only the law's treatment of queer people, but also the limits of ethical policing, the authority of experts, and the nature of sexual difference itself—debates that had often unexpected effects on the gay community's rights and freedoms. Examining those battles, *Vice Patrol* enriches understandings of the regulation of queer life in the twentieth century and disputes about police power that continue today.

Descendants of William Cromartie and Ruhamah Doane - Amanda Cook Gilbert 2013

This ambitious work chronicles 250 years of the Cromartie family genealogical history. Included in the index of nearly fifty thousand names are the current generations, and all of those preceding, which trace ancestry to our family patriarch, William Cromartie, who was born in 1731 in Orkney, Scotland, and his second wife, Ruhamah Doane, who was born in 1745. Arriving in America in 1758, William Cromartie settled and developed a plantation on South River, a tributary of the Cape Fear near Wilmington, North Carolina. On April 2, 1766, William married Ruhamah Doane, a fifth-generation descendant of a Mayflower passenger to Plymouth, Stephen Hopkins. If Cromartie is your last name or that of one of your blood relatives, it is almost certain that you can trace your ancestry to one of the thirteen children of William Cromartie, his first wife, and Ruhamah Doane, who became the founding ancestors of our Cromartie family in America: William, Jr, James, Thankful, Elizabeth, Hannah Ruhamah, Alexander, John, Margaret Nancy, Mary, Catherine, Jean, Peter Patrick, and Ann E. Cromartie. These four volumes hold an account of the descent of each of these first-generation Cromarties in America, including personal anecdotes, photographs, copies of family bibles, wills, and other historical documents. Their pages hold a personal

record of our ancestors and where you belong in the Cromartie family tree.

Single Molecular Machines and Motors - Christian Joachim
2015-01-17

Single Molecular Machines and Motors brings together different approaches and strategies to design, synthesize and study single molecular machines and motors in a multidisciplinary way. Written by leading international experts, this book summarizes the advances in the field through a number of disciplines. Some contributions describe molecular chemistry such as organic, aromatics, and coordination chemistry while others address theoretical chemistry in a predictive way or through post-experimental modelling. Experimental physics with extensive use of scanning probe microscopy (STM and AFM) is discussed for examining one single molecule. This book is aimed at those who are interested in the rapidly growing field of molecular machines and motors acting and studied at the single-molecule scale. The goal of the authors and editors is to provide the reader with an up-to-date summary while also offering future perspectives on the field.

Linking Optical and Chemical Properties of Dissolved Organic Matter in Natural Waters - Christopher L. Osburn 2017-01-17

A substantial increase in the number of studies using the optical properties (absorbance and fluorescence) of dissolved organic matter (DOM) as a proxy for its chemical properties in estuaries and the coastal

and open ocean has occurred during the last decade. We are making progress on finding the actual chemical compounds or phenomena responsible for DOM's optical properties. Ultrahigh resolution mass spectrometry, in particular, has made important progress in making the key connections between optics and chemistry. But serious questions remain and the last major special issue on DOM optics and chemistry occurred nearly 10 years ago. Controversies remain from the non-specific optical properties of DOM that are not linked to discrete sources, and sometimes provide conflicting information. The use of optics, which is relatively easier to employ in synoptic and high resolution sampling to determine chemistry, is a critical connection to make and can lead to major advances in our understanding of organic matter cycling in all aquatic ecosystems. The contentions and controversies raised by our poor understanding of the linkages between optics and chemistry of DOM are bottlenecks that need to be addressed and overcome.

Code of Federal Regulations - 2013

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. [Theory and Applications of Satisfiability Testing - SAT 2013](#) - Matti Jarvisalo 2013-06-24

This book constitutes the refereed proceedings of the 16th International Conference on Theory and Applications of Satisfiability Testing, SAT 2013, held in Helsinki, Finland in July 2013. The 21 regular papers, 5 short papers, and 5 tool papers presented together with 3 invited talks were carefully reviewed and selected from 71 submissions (850 regular, 15 short and 16 tool papers). The focus of the papers is on following topics: maximum satisfiability, encodings and applications, solver techniques and algorithms, clique-width and SAT, propositional proof complexity, parameterized complexity.

Human-Computer Interaction: Towards Intelligent and Implicit Interaction - Masaaki Kurosu 2013-07-01

The five-volume set LNCS 8004--8008 constitutes the refereed proceedings of the 15th International Conference on Human-Computer Interaction, HCII 2013, held in Las Vegas, NV, USA in July 2013. The

total of 1666 papers and 303 posters presented at the HCII 2013 conferences was carefully reviewed and selected from 5210 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. This volume contains papers in the thematic area of human-computer interaction, addressing the following major topics: adaptive, personalised and context-aware interaction; computational vision in HCI; emotions in HCI; biophysiological aspects of interaction.

The Concept of Military Objectives in International Law and Targeting Practice - Agnieszka Jachec-Neale 2014-10-24

The concept that certain objects and persons may be legitimately attacked during armed conflicts has been well recognised and developed through the history of warfare. This book explores the relationship between international law and targeting practice in determining whether an object is a lawful military target. By examining both the interpretation and its post-ratification application this book provides a comprehensive analysis of the definition of military objective adopted in 1977 Additional Protocol I to the four 1949 Geneva Conventions and its use in practice. Tackling topical issues such as the targeting of TV and radio stations or cyber targets, Agnieszka Jachec-Neale analyses the concept of military objective within the context of both modern military doctrine and the major coalition operations which have been undertaken since it was formally defined. This monograph will be of great interest to students and scholars of international law and the law of armed conflict, as well as security studies and international relations.

China, Taiwan, and International Sporting Events - Marcus P. Chu 2022-07-07

Chu explores the politics behind Taiwanese cities' pursuit of international sporting events, and the Chinese authorities' strategic measures in handling the relations with Taiwan since the 1990s. It is assumed that the Chinese authorities constantly oppose Taiwanese cities'

application for, and boycott their subsequent holding of, international sporting events. Doing so would obstruct Taiwan's capacity to raise its visibility and influence in world society, and defend the One-China principle. In fact, the role of China in Taiwan's pursuit of international sporting events is not invariably as a fatal obstructer, but sometimes a neutral bystander or even an enthusiastic supporter. Chu examines the reasons behind this phenomenon. Reviewing the 18 Taiwanese bidding attempts and four hosting projects, he argues that China's inconsistent response is determined by the ups and downs of Cross-Strait political ties. As a result, this book provides insight into the nexus between sports and politics in the context of China-Taiwan rivalry. A must read for scholars, students, and other watchers of Cross-Strait relations.

Faxed - Jonathan Coopersmith 2015-02-28

Faxed is the first history of the facsimile machine—the most famous recent example of a tool made obsolete by relentless technological innovation. Jonathan Coopersmith recounts the multigenerational, multinational history of that device from its origins to its workplace glory days, in the process revealing how it helped create the accelerated communications, information flow, and vibrant visual culture that characterize our contemporary world. Most people assume that the fax machine originated in the computer and electronics revolution of the late twentieth century, but it was actually invented in 1843. Almost 150 years passed between the fax's invention in England and its widespread adoption in tech-savvy Japan, where it still enjoys a surprising popularity. Over and over again, faxing's promise to deliver messages instantaneously paled before easier, less expensive modes of communication: first telegraphy, then radio and television, and finally digitalization in the form of email, the World Wide Web, and cell phones. By 2010, faxing had largely disappeared, having fallen victim to the same technological and economic processes that had created it. Based on archival research and interviews spanning two centuries and three continents, Coopersmith's book recovers the lost history of a once-ubiquitous technology. Written in accessible language that should appeal to engineers and policymakers as well as historians, Faxed explores

themes of technology push and market pull, user-based innovation, and "blackboxing" (the packaging of complex skills and technologies into packages designed for novices) while revealing the inventions inspired by the fax, how the demand for fax machines eventually caught up with their availability, and why subsequent shifts in user preferences rendered them mostly passé.

Microwave Power Engineering - Ernest C. Okress 2013-10-22

Microwave Power Engineering, Volume 2: Applications introduces the electronics technology of microwave power and its applications. This technology emphasizes microwave electronics for direct power utilization and transmission purposes. This volume presents the accomplishments with respect to components, systems, and applications and their prevailing limitations in the light of knowledge of the microwave power technology. The applications discussed include the microwave heating and other processes of materials, which utilize the magnetron predominantly. Other applications include microwave ionized gases for chemical processing, space (propulsion), and scientific (controlled nuclear fusion) purposes; particle accelerators for scientific, medical, and industrial purposes; military and aerospace for phased array focused microwave energy, experimental vehicle hovering; and dynamics, for experimental microwave motors and experimental waveguide vehicle transport. This text also provides recommendations with respect to what can be done to accelerate a balanced growth of the subject and to attract more creative interest and support.

Hypocrisy - Vincent Shing Cheng 2019-10-25

Although the official propaganda surrounding the drug detainees in China is that of helping, educating, and saving them from their drug habits and the drug dealers who lure them into drug abuse, it is clear, according to Vincent Shing Cheng, that those who have gone through the rehabilitation system lost their trust in the Communist Party's promise of help and consider it a failure. Based on first-hand information and established ideas in prison research, Hypocrisy gives an ethnographic account of reality and experiences of drug detainees in China and provides a glimpse into a population that is very hard to reach and study. Cheng argues that there is a discrepancy between the propaganda of 'helping' and 'saving' drug users in detention or rehabilitation centres and the reality of 'humiliating' them and making them prime targets of control. Such a discrepancy is possibly threatening rather than enhancing the party-state's legitimacy. He concludes the book by demonstrating how the gulf between rhetoric and reality can illuminate

many other systems, even in much less extreme societies than China. 'This book is highly original, meticulously researched, and insightful. The study comes to very informative conclusions that contrast empirical data with the way drug rehabilitation is displayed in the media and government propaganda. It is a must-read for scholars in prison studies, but should also be recommended to criminologists, political scientists, and lawyers.' —Saskia Hufnagel, Queen Mary University of London 'The book is an excellent account of the state's handling of drug abuse in China and convincingly argues that the institutions' official purpose of helping the offenders is poorly served and largely hypocritical. A compelling study based on solid and in-depth empirical research.' —James D. Seymour, Columbia University

Springer Handbook of Petroleum Technology - Chang Samuel Hsu 2017-12-20

This handbook provides a comprehensive but concise reference resource for the vast field of petroleum technology. Built on the successful book "Practical Advances in Petroleum Processing" published in 2006, it has been extensively revised and expanded to include upstream technologies. The book is divided into four parts: The first part on petroleum characterization offers an in-depth review of the chemical composition and physical properties of petroleum, which determine the possible uses and the quality of the products. The second part provides a brief overview of petroleum geology and upstream practices. The third part exhaustively discusses established and emerging refining technologies from a practical perspective, while the final part describes the production of various refining products, including fuels and lubricants, as

well as petrochemicals, such as olefins and polymers. It also covers process automation and real-time refinery-wide process optimization. Two key chapters provide an integrated view of petroleum technology, including environmental and safety issues. Written by international experts from academia, industry and research institutions, including integrated oil companies, catalyst suppliers, licensors, and consultants, it is an invaluable resource for researchers and graduate students as well as practitioners and professionals.

Plastics in Building Structures - D. S. Mahon 2013-09-11

Plastics in Building Structures covers the proceedings of a conference, held in London on June 14-16, 1965. This conference focuses on the applications of plastics materials in structures. This book emerged from 39 papers presented at the conference. The introductory papers describe the properties of plastics in relation to building structures, and the economic aspects, fire regulations, and flammability of these materials. Considerable papers are devoted to various areas of application of plastics, including adhesives, polymer cements, cored chipboard units, and glued timber. These topics are followed by discussions on the characterization, design, and structural and physical properties of plastics. The final chapters review the commercial development and applications of plastic materials. This book will prove useful to engineers,

designer, manufacturers, and researchers in the allied fields.
