Pathways to Literacy - Trevor Cairney
1995-11-02

This text recognizes that there is no simple way to develop literacy. It begins with the central premise that literacy is not simply a cognitive process, but a set of social practices used in socio-cultural contexts, and argues that literacy learners come to school with unique social histories that need to be recognised in the programmes devised to facilitate learning. Cairney claims that literacy is not a unitary social practice and suggests that there are many

forms of literacy, each with specific purposes and contexts in which they are used. The author provides a look at the many practical classroom strategies and practices that are necessary to recognize multiple pathways to literacy.

How People Learn - National Research Council
2000-08-11

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do with curricula, classroom settings, and teaching methods--to help children learn most effectively? New

evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the

role of technology in education.

Handbook of Reading Research - Michael L. Kamil 2014-04-08

In Volume III, as in Volumes I and II, the classic

topics of reading are included--from vocabulary and comprehension to reading instruction in the classroom--and, in addition, each contributor was asked to include a brief history that chronicles the legacies within each of the volume's many topics. However, on the whole, Volume III is not about tradition. Rather, it explores the verges of reading research between the time Volume II was published in 1991 and the research conducted after this date. The editors identified two broad themes as representing the myriad of verges that have emerged since Volumes I and II were published: (1) broadening the definition of reading, and (2) broadening the reading research program. The particulars of these new themes and topics are addressed.

The National Assessment of College Student Learning - Addison Greenwood 1994

This report presents the primary papers given at a 1992 workshop to identify specific higher order thinking and communication skills and to develop appropriate indicators of collegiate outcomes as suggested by Goal 5.5 of the National Education Goals formulated in 1990.

This goal addressed improvement in college graduates' ability to "think critically, communicate effectively, and solve problems." Part 1 presents the five papers upon which the working groups built their discussions. These papers are: (1) "Skills for Citizenship" (Suzanne W. Morse); (2) "A National Assessment of Critical Thinking Skills in Adults: Taking Steps Toward the Goal" (Diane F. Halpern); (3) "Assessing Thinking: A Framework for Measuring Critical Thinking and Problem Solving Skills at the College Level" (David

Perkins et al.); (4) "Assessing Speaking and Listening: Preliminary Considerations for a National Assessment" (John A. Daly); and (5) "No Guru, No Method, No Teacher: The Communication Domain and the NACSL (National Assessment of College Student Learning)" by Stephen P. Witte. Part 2 includes group summary reports, reviewers' comments, a listing of speaking and listening skills, and additional information on an ongoing Delphi study at Pennsylvania State University. Part 3 presents comments by participants on the conference products and results of a survey of all participants. Consensus on "next steps" included recommending further development of the taxonomy of skills, abilities, and competencies. (The five papers contain references.) (DB)

Preventing Reading Difficulties in Young Children - National Research Council 1998-07-22
While most children learn to read fairly well, there remain many young Americans whose

futures are imperiled because they do not read well enough to meet the demands of our competitive, technology-driven society. This book explores the problem within the context of social, historical, cultural, and biological factors. Recommendations address the identification of groups of children at risk, effective instruction for the preschool and early grades, effective approaches to dialects and bilingualism, the importance of these findings for the professional development of teachers, and gaps that remain in our understanding of how children learn to read. Implications for parents, teachers, schools, communities, the media, and government at all levels are discussed. The book examines the epidemiology of reading problems and introduces the concepts used by experts in the field. In a clear and readable narrative, word identification, comprehension, and other processes in normal reading development are discussed. Against the background of normal progress, Preventing Reading Difficulties in

Young Children examines factors that put children at risk of poor reading. It explores in detail how literacy can be fostered from birth through kindergarten and the primary grades, including evaluation of philosophies, systems, and materials commonly used to teach reading.
