**Urban Biodiversity** - Alessandro Ossola 2017-11-28

Urban biodiversity is an increasingly popular topic among researchers. Worldwide, thousands of research projects are unravelling how urbanisation impacts the biodiversity of cities and towns, as well as its

benefits for people and the environment through ecosystem services. Exciting scientific discoveries are made on a daily basis. However, researchers often lack time and opportunity to communicate these findings to the community and those in charge of managing, planning and designing for urban biodiversity. On the other hand, urban practitioners

frequently ask researchers for more comprehensible information and actionable tools to guide their actions. This book is designed to fill this cultural and communicative gap by discussing a selection of topics related to urban biodiversity, as well as its benefits for people and the urban environment. It provides an interdisciplinary overview of scientifically grounded knowledge vital for current and future practitioners in charge of urban biodiversity management, its conservation and integration into urban planning. Topics covered include pests and invasive species, rewilding habitats, the contribution of a diverse urban agriculture to food production, implications for human well-being, and how to engage the public with urban conservation strategies. For the first time, world-leading researchers from five continents convene to offer a global interdisciplinary perspective on urban biodiversity narrated with a simple but rigorous language. This book synthesizes research

at a level suitable for both students and professionals working in nature conservation and urban planning and management.

Russian - May Smith 2006

This book seeks to establish the degree to which Gallicisms permeated the Russian language in the eighteenth century. The largest group of borrowings were the semantic and phraseological calques. In order to examine this influence, the author has selected scores of examples from the original works, translations and correspondence of Russian writers from the 1730s to the end of the century. The calques analysed belong to various registers of the literary language, from the prose used in essays and correspondence to the most lyrical form found in poetry and certain translations. This book concludes that the French influence was overwhelming and fully enhanced the Russian literary language that was developed during this period.
