Legitimate expectations in Luxembourg tax law - Fatima Chaouche 2019-06-25

This book is the result of a 4-year research project conducted at the Faculty of Law of the University of Luxembourg. It explores the legal value and enforceability of tax circulars and tax rulings in Luxembourg domestic law in light of the principle of legitimate expectations and related principles. After studying the historical roots of both interpretative acts, this research questions the level of protection taxpayers enjoy when relying on circulars and tax rulings and

contains a review of decades of administrative case-law to assess the judicial discourse on taxpayers' rights to certainty. This book further investigates the case of circulars and tax rulings that contain interpretations of tax laws that are contrary to the law (contra legem) and builds upon the existing normative framework to introduce proposals addressing issues of uncertainty and inequality taxpayers are likely to suffer when relying on such interpretative acts. Prix Pierre Pescatore de la Faculté de Droit de Luxembourg (École doctorale de droit).

**Medical Emergency** - Ian Howie-Willis  
2012-03-15

Major-General `Ginger' Burston led the Army Medical Service throughout the Pacific campaigns. This pivotal book explains how Burston and his medical team kept Allied troops

healthy in primitive and hostile conditions and during the greatest medical emergency of World War II - the struggle against malaria. By keeping the soldiers healthy, and particularly by reducing malaria infection rates from 100 to less than one case per 1000 troops per week, the Army Medical Service assured an Allied victory over Japan. A Medical Emergency tells this remarkable story for the first time. In engrossing detail and using contemporary accounts, veteran historian Ian Howie-Willis brings to life the struggle of 'Ginger' Burston and his Medical Service to fight a deadly opponent that decimated the ranks of friend and foe alike. Their victory was key to the ultimate Allied success.

*Dietary Reference Intakes for Vitamin C, Vitamin E, Selenium, and Carotenoids* - Institute of Medicine 2000-08-27

This volume is the newest release in the authoritative series of quantitative estimates of

nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient.
